A Guide to More Reliable Streams

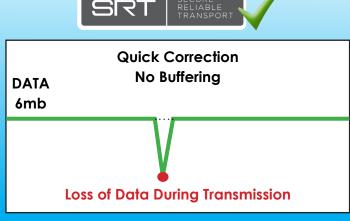

Does your stream pixelate or buffer?

Streaming RTMP over unreliable, low-Bandwidth networks can cause issues.

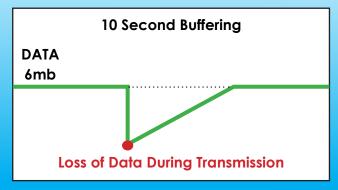

Replace RTMP with SRT - A reliable SRT to dvCloud workflow will fix most streaming issues.

Why Use SRT?

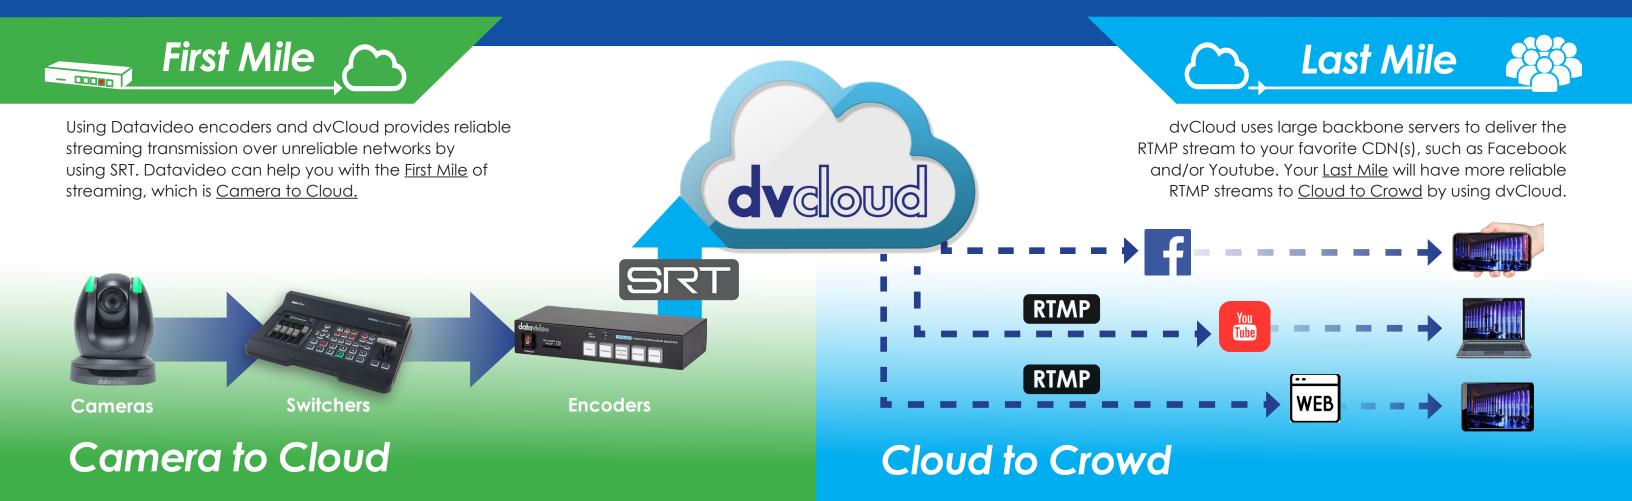

SRT handles problematic networks more efficiently than RTMP protocol, which is the most common streaming protocol. It requires less bandwidth than RTMP to provide a reliable stream. SRT handles data more effectively than RTMP as a result you have less data loss during transmission.

RTMP

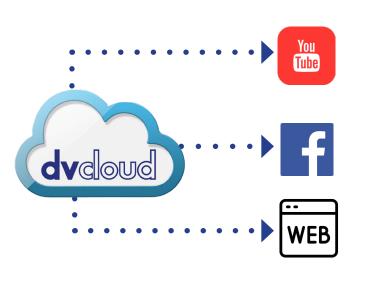

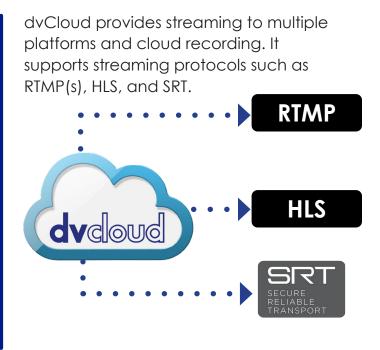

30 Seconds

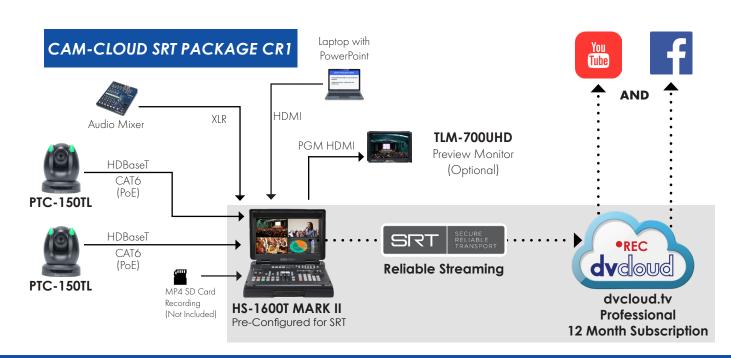

Why dvCloud?

dvCloud provides streaming to multiple platforms and cloud recording.
